At IDX Inc. Car Wash Equipment we manufacture dependable, high-speed, efficient car wash equipment with the investor in mind. Our products are made to be the best on the market. We don't take shortcuts, because there's no substitute for high quality.

SPEED

The IDX TWA3000 is one of the fastest touch-free in-bay automatics in the industry today. It is able to wash more cars per hour by washing three sides of a vehicle simultaneously, compared to competitive models that wash only 1 1/2 sides at a time. Its unique design cuts down on wasted movement, thus increasing throughput.

INTELLIGENCE

The onboard IDX Wash Commander monitors the entire system as well as the customer's vehicle and keeps you informed of unusual events. Wash Commander is not only your consultant in troubleshooting but in some cases is your service technician.

ECO-FRIENDLY

Pumping equipment, offering operators the opportunity to further reduce water and utility requirements resulting in even lower operating costs. IDX Inc. also offers an advanced Spot Free Rinse water reclamation system to conserve water usage and reduce discharge in order to meet standards and regulations at your location.

VERSATILITY

The TWA3000, powered by IDX Wash Commander's smart technology carefully determines the length and width of each vehicle. This feature allows you, the operator, the versatility to wash anything from the smallest cars to the longest double cab pickups, even dually trucks. Its great functionality also permits the selection of wash cycles just right for each location. Different geographical locations have different needs to produce clean cars and every IDX product offers that flexibility.

CLEANING

IDX developed the TWA3000 to effectively clean more cars per hour. Its highly efficient chemical delivery system, along with maximum water impingement, provides optimum wash results. To further enhance cleaning, computer controlled on-board side rotating side and rocker panel blasters nozzles and underbody wash are included as standard equipment. Better cleaning ensures customer loyalty.

RELIABILITY

When investing in equipment, reliability year after year is of utmost importance. Electrically VFD powered, the TWA3000 gear drive system is so reliable we offer a 5 YEAR LIMITED WARRANTY on specific components – a feature unmatched in the industry. The simple design of the TWA3000 allows for minimal moving components, which adds to its reliability and longevity. Less downtime equals more profit, year after year.

- Instructional LED Sign Packages
- Wall or Floor Mount Options
- Optional 102" Height Version Available
- Zero Degree Oscillating Nozzles
- Door Controls
- Bug and Bumper Cleaner
- IDX Wash Commander Buy-Up

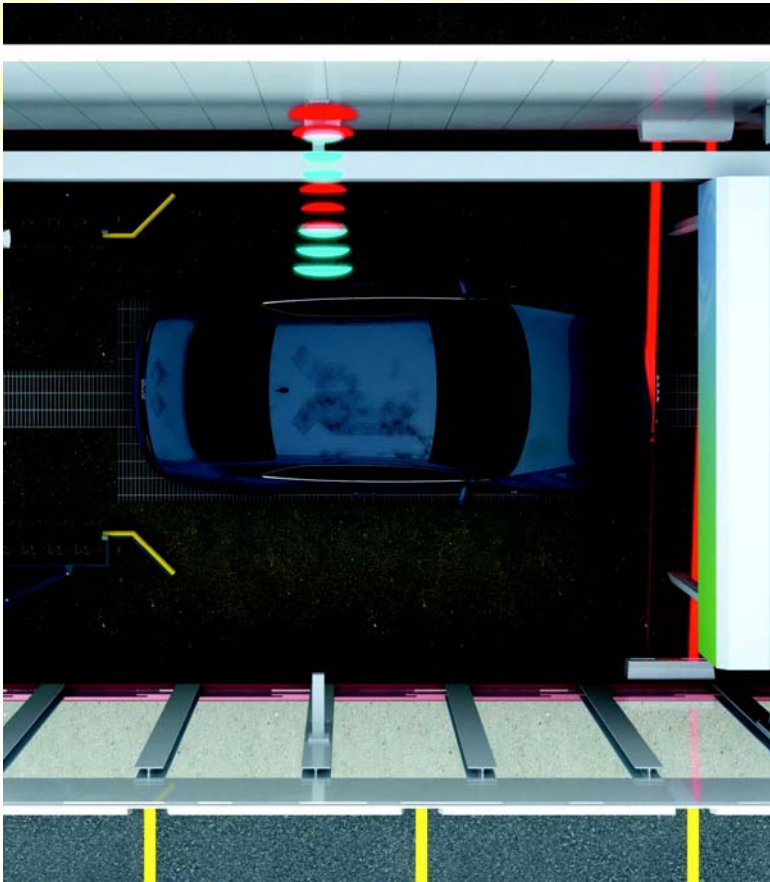

CONSTRUCTION

The TWA3000's customer-friendly, open design makes it easier to enter and exit the wash bay, increasing throughput and making it more visually appealing. The wall-mounted frame and elevated carriage system help protect the unit from strike damage as well as chemicals and grime.

IDX ELECTRONIC SCANNING AND POSITIONING

This virtual stop station "senses" the car's location within the bay while the IDX Wash Commander, "smart system", eliminates the need for a positioning device on the floor. This feature makes it easier and faster for customers to drive in and out of the wash bay. Increased throughput means increased profit. It also means satisfied returning customers who have no concerns about lining up the car to hit a floor device.

MyWash[®] BUY UP TECHNOLOGY

Gives you the functionality of a Tunnel Wash Controller by allowing your customers to upgrade the wash package they have selected with any additional wash functions they may like to purchase. The system then places all purchased upgrades in the proper position in the wash cycle. This allows your customers to have complete customization of their wash.

System Dimensions

• Bay Dimensions

Height - 12'0" (10'6" minimum)

Width - 15'4" (13'7" minimum)

Length - 30' (27' minimum)

Maximum Vehicle Height

7' standard

Optional 8' 6" extended height

Required Utilities

Electrical:	Voltage	*Amps	KVA
	208 / 240	100	35
	400	48	35
	460	42	35
	575	34	35

50 hertz available. Call factory for details.

*20 amp control circuit required. Not included in above specifications.

Water inlet: 1" @ 50 psi inlet pressure

Compressed Air: Approx. 10 CFM @ 100 psi
