Product Data Sheet

The **“TUNNEL COMMANDER”** accommodates nearly every tunnel wash and is designed to grow as you grow. If you add equipment to your tunnel, you can add additional IO modules to your controller system without replacing what you have. The IO Modules themselves efficiently combine functions allowing you to program your tunnel controls to take advantage of shared conditions or specific applications. A display sign, for example, can be paired to concurrently activate with an applicator, or on a time of day output.

The **“UNIVERSAL WASH CONTROLLER”** can replace the OEM PLC controller of most all types of “In-Bay Automatic Wash Equipment. The user friendly multi-step programming configuration, and point and click graphical interface provides easy equipment setup and wash service programming.

Custom programming and hardware options are also available for Automatic Carwash Equipment manufactures, contact IDX sales.
